**INFORMATION DISCLOSURE STATEMENT**

1. In accordance with the duty of disclosure under 37 C.F.R. § 1.56 and in conformance with the procedures of 37 C.F.R. §§ 1.97 and 1.98 and M.P.E.P. § 609, attorneys for Applicants hereby bring the following three (3) references to the attention of the Examiner. The references are listed on the attached modified PTO Form No. 1449. It is respectfully requested that the information be expressly considered during the prosecution of this application, and that the references be made of record therein and appear among the "References Cited" on any patent to issue therefrom.
2. A copy of each Non-U.S. Patent or Non-U.S. Patent Publication listed on the Form PTO-1449, if any, is enclosed.
3. By submitting this Information Disclosure Statement, Applicants make no representation that a search has been performed, of the extent of any search performed, or that more relevant information does not exist.

4. By submitting this Information Disclosure Statement, Applicants make no representation that the information cited in the Statement is, or is considered to be, material to patentability as defined in 37 C.F.R. §1.56(b).
5. By submitting this Information Disclosure Statement, Applicants make no representation that the information cited in the Statement is, or is considered to be, in fact, prior art as defined by 35 U.S.C. §102.

Respectfully submitted,

Dated: September 8, 2005

Abstract of corresponding document: EP0813348

The arrangement includes several separate measurement points which communicate by wireless communication with a central control. A data transmitter is provided to allocate and call up identification data to or from individual measurement points. The data transmitter has a data transmission interface formed such that data is transmitted to or from a measurement point. A transceiver is connected to the central control. The transceiver enables data transmission without a close physical relationship between the transceiver and a measuring point provided with an identification to transmit measurement data, control data and configuration data. Preferably, the arrangement has a measurement position controller with an identification unit for a received switch signal. The identification unit can be activated even with a measurement point not yet provided with identification.
